Thursday, 7 May 2020 | 17:00 – 18:00, Online with BigBlueButton

### **Strings at the horizon**

**Prof. Ulf Danielsson**

*Uppsala University, Sweden*

#### **ABSTRACT**

*The physics of horizons is one of the deepest problems in fundamental physics. In this talk we explore the mysteries associated with event horizons of black holes, as well as dark energy and the cosmic horizon. Has string theory provided solutions or is there still something missing?*
